

**Template about Syncee information you can include into your newsletter send out to your customers when you are promoting your products.**

Manage our products easily. Integrate the data to your online store with the adequate application.

Do you want:

- to upload and update products (data) easily to your online store,
- to use an upsert function (upload and update at the same time),
- to save money and time,
- to automate the whole process of product managing,
- to convert the supplier's currency to your online store's automatically,
- an app you can filter your products with,
- to set price ranges in your store,
- full variant support,
- an app you can schedule and automate the running of the upload,
- an app that's pricing plan is based on product number not variant SKU,
- an app for what it doesn't matter how many products and suppliers you work with,
- your store to be always up-to-date,
- an app that you can use without programming skills?

We proudly announce that our products are now available in Syncee's directory called the Syncee Supplier Exchange, as we became a Syncee supplier.

Syncee is a Shopify application that makes product import and update even more easier for those merchants who use Shopify. If your online store is running on this e-commerce platform and you would like to speed up the product sourcing process, you can install Syncee to your shop from the Shopify App Store and find us among the suppliers in the Supplier Exchange menu. You can import our products with just a few clicks to your store.

Don't worry, you can filter those products that you do not wish to use from the data feed file. If you need more information about the catalog or the application itself, contact [hello@syncee.io](mailto:hello@syncee.io) or check out the website: [www.syncee.io](http://www.syncee.io)
